- Goal 1 Improve the accuracy of patient identification.
- 1A Use at least two patient identifiers (neither to be the patient's room number) whenever administering medications or blood products; taking blood samples and other specimens for clinical testing, or providing any other treatments or procedures.
- 1B Not applicable.
- Goal 2 Improve the effectiveness of communication among caregivers.
- 2A For verbal or telephone orders or for telephonic reporting of critical test results, verify the complete order or test result by having the person receiving the order or test result "read-back" the complete order or test result.
- 2B Standardize a list of abbreviations, acronyms and symbols that are not to be used throughout the organization.
